The G-Range of Golf buggies have been designed without compromise
This buggy is available in two forms either; Petrol or Lithium Electric.

The Pro-G Lithium model has the benefit of our on board 27+ hole Lithium battery fitted as standard,
with a life expectancy of around a thousand charges and a guarantee of 2 years.

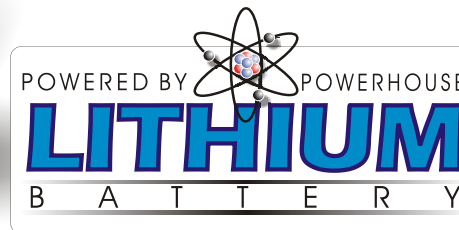

In all other ways the two models are similar. Styling and design were at the forefront
of the G-range from the outset. You will immediately notice the sleek lines and
fluid design the Pro-G Lithium offers.

The Design and Performance work hand in hand and the performance is not compromised in any way.

The Lithium battery effortlessly propels the buggy of all kinds of terrain and
will continue to do so for many years to follow.

The main speed controller of choice is the 140 S-Drive, this in conjunction with the Lithium battery will
squeeze all available power from the motor, making this buggy a force
to be reckoned with, what ever the conditions.

Available as standard in White Black or cream.
However, you can specify any colour you desire as an optional extra
